

What is a cataract?

- A. A large waterfall
- B. A type of rock formation
- C. An eye condition that causes blurry vision
- D. A type of tropical storm

Show Answer...

Correct Answer: C

Explanation:

A cataract is a common eye condition that can cause blurry vision, faded colors, and difficulty seeing in low light. It occurs when the natural lens of the eye becomes cloudy and opaque, which can interfere with the passage of light and affect the clarity of images that reach the retina. Cataracts are often associated with aging, but they can also be caused by other factors such as injury, disease, or prolonged exposure to UV radiation. While they can be corrected with surgery, cataracts can have a significant impact on daily life and should be treated by a qualified healthcare professional. A large waterfall, a type of rock formation, and a type of tropical storm are not related to cataracts.

Biology MCQs

Biology MCQs by CSS MCQs

[Biology MCQs by CSSMCQs](#)

Here, you will find all [Biology MCQs](#) with their Answers. These MCQs of Bio would help you gain higher marks in entry tests of FPSC, PPSC, KPPSC, SPSC, NTS, PTS, OTS, CTS, MDCAT, ECAT, ETEA, NUMS and all other entry tests preparation. These MCQs will help you get better marks in every kind of job or university admission tests.

Our focus will be on the fundamental level of the Biology course. However, advance level of Bio main branches Zoology and Botany MCQs will also be shared with their correct answers. For other subject's MCQs Click [HERE](#)
