

Mastology is the study of:

- A. Breasts
- B. Blood disorders
- C. Skin diseases
- D. Eye diseases

Show Answer...

Correct Answer: A (Breasts)

Explanation:

Mastology is a specialized field of medicine that focuses on the study and diagnosis of breast diseases and conditions. It involves the understanding of breast anatomy, physiology, pathology, and the management of breast-related disorders.

Option B, blood disorders, is not related to mastology. Blood disorders are typically studied in the field of hematology, which focuses on the diagnosis and treatment of conditions related to blood and blood-forming tissues.

Option C, skin diseases, is not related to mastology. The study of skin diseases falls under the branch of dermatology, which deals with the diagnosis, treatment, and prevention of various skin conditions.

Option D, eye diseases, is not related to mastology. The study of eye diseases is a part of ophthalmology, which focuses on the diagnosis and treatment of disorders and diseases of the eyes.

In conclusion, mastology specifically pertains to the study of breasts. It involves the examination, understanding, and management of breast-related conditions, playing a crucial role in the diagnosis and treatment of breast diseases.
