

The biggest star in our galaxy is:

The biggest star in our galaxy is:

- A. Epsilon Aurigae
- B. Proxima Centauri
- C. Sirius
- D. Sun

Show Answer...

Correct Answer: A (Epsilon Aurigae)

Biggest Star In Our Galaxy:

Epsilon Aurigae is not only the largest star in our galaxy but also one of the largest known stars in the universe. It is located in the constellation Auriga and has a mass of about 5 times that of the Sun. Option B, Proxima Centauri, is the closest star to the Sun, but it is not the biggest. Option C, Sirius, is one of the brightest stars in the night sky, but it is not the biggest either. Option D, the Sun, is the closest star to Earth and the center of our solar system, but it is not the biggest star in the galaxy.
