- D. Psychology

Show Answer...

Correct Answer: A (Anthropology)

Explanation:

The study of human societies, cultures, and their development is called anthropology. Anthropology is a social science discipline that examines various aspects of human life, including social structures, beliefs, traditions, languages, and the development of cultures over time.

Option B, sociology, is another social science discipline that focuses on the study of society, social relationships, and social behavior. While sociology shares some similarities with anthropology, it has a broader scope and does not exclusively focus on cultures and their development.

Option C, archaeology, is the study of human history and prehistory through the excavation and analysis of artifacts, structures, and other physical remains. While archaeology contributes to our understanding of past societies and cultures, it is not solely focused on the study of contemporary societies and their development.

Option D, psychology, is the scientific study of the mind and behavior. It explores individual and group processes, but its primary focus is on the functioning of the human mind rather than the broader study of societies and cultures.

In conclusion, the study of human societies, cultures, and their development is specifically referred to as anthropology. Anthropologists explore various aspects
