

The volume of one kilogram of water at  $4^{\circ}\text{C}$  is equal to one litre. The temperature of water is kept at  $4^{\circ}\text{C}$  because water

**The volume of one kilogram of water at  $4^{\circ}\text{C}$  is equal to one litre. The temperature of water is kept at  $4^{\circ}\text{C}$  because water**

- A. has no dissolved gasses at this temperature
- B. has maximum density at this temperature
- C. polarity of water molecule is least at this temperature
- D. dipole moment has maximum value at this temperature

Show Answer...

**Correct Answer: B. has maximum density at this temperature**
