6. Conclusion

Introduction of Energy Crisis in Pakistan

Energy crisis is a matter of grave concern all over the world in the contemporary run. Pakistan, a third-world country, has been a victim of this crisis since its inception. In Pakistan, these crises are worsening over the course of time. The crisis of energy has given birth to many issues. It has given a severe setback to the country's economy. It has badly disturbed the socio-economic fabric of Pakistani society. It has added to the miseries of people. Lack of comprehensive planning and long-term policies are the root cause of this problem. However,

What are the causes and consequences of the energy crisis in Pakistan?

inadequate funds, resources and awareness have aggravated the country's energy quandary condition. Which, in return, have given unprecedented load shedding, economic downfall, closure of industries, unemployment & poverty. Therefore, this problem must be given due attention. There is a need for consensus among the political elite, the construction of new dams, proper use of alternative energy resources and awareness about the misuse of energy for the common man before the problem becomes inescapable.
