

# What is an otoscope used to examine

- A. A device used to measure blood pressure
- B. A device used to examine the ears
- C. A device used to take an electrocardiogram
- D. A device used to measure oxygen saturation

Show Answer...

**Correct Answer: B (A device used to examine the ears)**

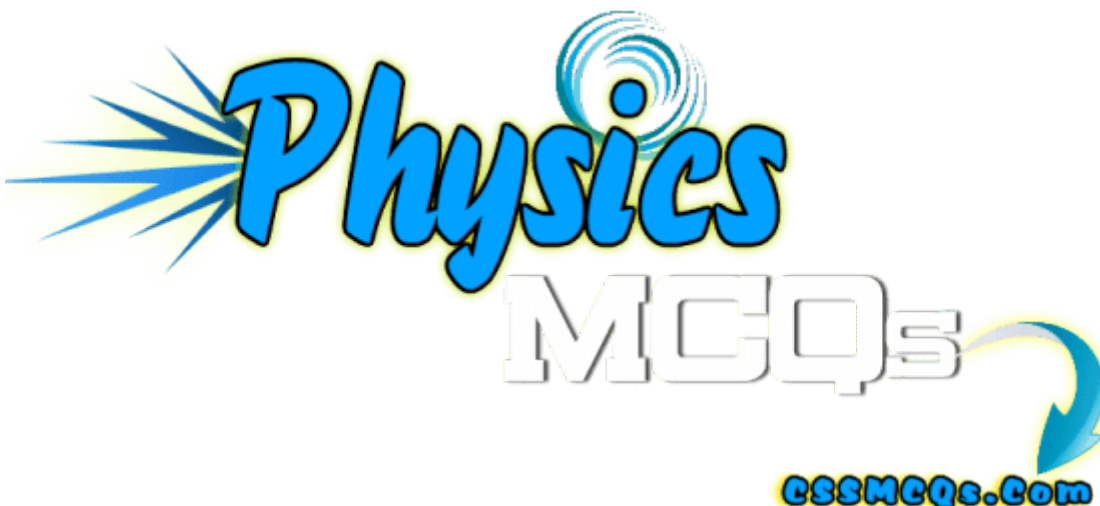

## Explanation:

An Otoscope is a medical device used to examine the ears. It consists of a light source and a magnifying lens, which enables the physician to view the ear canal and eardrum. Otoscopes are commonly used to diagnose and treat ear infections, as well as other ear-related conditions. Options A, C, and D are all incorrect definitions. It is important to understand medical devices and their uses to effectively communicate and receive proper medical care.
