

What is the average of the first five multiples of 7?

Find the average of the first five multiples of 7:

- A. 10
- B. 14
- C. 21
- D. 35

Show Answer...

Correct Answer: C (21)

Explanation:

The first five multiples of 7 are **7, 14, 21, 28, 35**.

To find the average, add up all the multiples and then divide the sum by the total number of multiples (which is 5 in this case):

$$\text{Average} = (7 + 14 + 21 + 28 + 35) / 5$$

$$\text{Average} = 105 / 5$$

$$\text{Average} = 21$$

Therefore, the average of the first five multiples of 7 is 21, which corresponds to Option C.

What is the average of the first five multiples of 7?
