

# What is the main function of a nerve impulse?

- A. To transmit information throughout the body
- B. To create energy
- C. To produce hormones
- D. To control muscle movement

Show Answer...

**Correct Answer: ) To transmit information throughout**

## Explanation:

Nerve impulses, also known as action potentials, are electrical signals that travel along the axons of nerve cells. These signals help to transmit information throughout the body, allowing for communication between different parts of the nervous system.
