

What is the main function of the nervous system?

What is the main function of the nervous system?

- A. To transport oxygen and nutrients
- B. To protect the body from infection
- C. To coordinate and control body functions
- D. To remove waste products

Show Answer...

Correct Answer: C.To coordinate and control body functions

Explanation:

The nervous system, which includes the brain, spinal cord, and nerves, is responsible for coordinating and controlling body functions through the transmission of nerve impulses. It also helps to detect changes in the environment and respond to them.
