

What is the name of the transparent, curved structure in the eye that helps to focus light?

What is the name of the transparent, curved structure in the eye that helps to focus light?

- A. Cornea
- B. Retina
- C. Lens
- D. Optic nerve

Show Answer...

Correct Answer: C. Lens

Explanation: The lens is the transparent, curved structure in the eye that helps to focus light onto the retina, allowing us to see clearly. It's located behind the iris and the pupil.
