

What is the name of the transparent part of the eye that is located behind the lens and helps to focus light onto the retina?

What is the name of the transparent part of the eye that is located behind the lens and helps to focus light onto the retina?

- A. Vitreous humor
- B. Aqueous humor
- C. Retina
- D. Crystalline lens

Show Answer...

Correct Answer: B. Aqueous humor

Explanation:

The vitreous humor is the transparent part of the eye that is located behind the lens and helps to focus light onto the retina.
