

What is the name of the world's largest waterfall by volume of water?

What is the name of the world's largest waterfall by volume of water?

- A. Niagara Falls
- B. Victoria Falls
- C. Iguazu Falls
- D. Angel Falls

Show Answer...

Correct Answer: B (Victoria Falls)

Explanation:

Victoria Falls is located on the Zambezi River, at the border of Zambia and Zimbabwe in southern Africa. With a height of 108 meters (354 feet) and a width of 1,708 meters (5,604 feet), it is considered the largest waterfall in the world by volume of water.

The falls were named after Queen Victoria of the United Kingdom by Scottish explorer David Livingstone, who discovered them in 1855. The local name of the falls is Mosi-oa-Tunya, which means "The Smoke That Thunders" in the language of the indigenous people.

Victoria Falls is a major tourist attraction and a UNESCO World Heritage Site. Visitors can experience the falls up close by taking a guided tour, walking across the Victoria Falls Bridge, or even bungee jumping or white-water rafting in the Zambezi River below.

In addition to its natural beauty, Victoria Falls also has cultural and historical significance. The falls have been an important site for indigenous people for thousands of years, and the area played a key role in the development of colonialism and trade in southern Africa. Today, it remains a symbol of the region's natural and cultural heritage.
