Show Answer...

Correct Answer: D. Ethanol

#### **Ethanol:**

Ethanol is a type of alcohol that is produced from the alcoholic fermentation of biomass, such as grains, fruits, or vegetables. During this process, yeast or bacteria consume the sugars in the biomass and produce ethanol and carbon dioxide as by-products. The ethanol is then separated from the mixture and used as a fuel, a solvent, or an ingredient in various products, including alcoholic beverages. The other options listed (A. Ethane gas, B. Methane gas, and C. Naphthalene gas) are not produced through alcoholic fermentation and are not related to the process.
