

## Which of the following is/are the example/s of non-flowering plants?

- A. Moss, Fern
- B. Pine, Juniper
- C. Thuja, Sago palm
- D. All of these

Show Answer...

**Correct Answer: D. All of these**

### **## Explanation:**

Moss and fern are examples of non-flowering plants, also known as cryptogams or vascular cryptogams. These plants reproduce via spores, spores of gametophytes or spores of spores of the plant itself. All of the options (A, B, C, and D) are examples of non-flowering plants. Moss, Fern, Pine, Juniper, Thuja, and Sago palm are all types of plants that do not produce flowers or seeds and reproduce in different ways. All of the options (A, B, C, and D) are examples of non-flowering plants. Moss, Fern, Pine, Juniper, Thuja, and Sago palm are all types of plants that do not produce flowers or seeds and reproduce in different ways.

### **Moss**

Moss is a type of non-flowering plant that belongs to the division Bryophyta. Mosses have simple leaves and stems and typically grow in damp, shady environments. They reproduce via spores or by producing spores of the gametophyte generation of the plant.

### **Fern**

Ferns are also non-flowering plants and belong to the division Pteridophyta. Ferns have complex leaves, called fronds, that are used for photosynthesis. They reproduce via spores or by producing spores of the gametophyte generation of the plant, which produces spores of the fern.

Which of the following is/are the example/s of non-flowering plants?

## **Pine**

Pine is a type of conifer, which is a group of flowering plants. Conifers are characterized by having cones, which contain the seeds of the plant. Pine trees can grow to be very large and are often used for timber or as ornamental plants.

## **Juniper**

Juniper is also a type of conifer, and like pine, is a type of flowering plant. Junipers are commonly used as ornamental plants, and some species are used in cooking and as a flavoring in gin.

## **Thuja**

Thuja is a type of gymnosperm, which is a group of flowering plants that are characterized by having naked seeds that are not enclosed in an ovary. Thuja is commonly used as an ornamental plant, and some species are used in traditional medicine.

## **Sago Palm**

Sago palm is also a type of gymnosperm and like Thuja, it is a type of flowering plant. Sago palms are commonly used as ornamental plants and are grown for their large, feathery leaves. The seeds of the sago palm are used to make flour and can also be used for cooking.
