Who invented Bitcoin?

A. Elon Musk
B. Bill Gates
C. Satoshi Nakamoto
D. Mark Zuckerberg

Show Answer...
Correct Answer: C (Satoshi Nakamoto)

Explanation:

Bitcoin is a decentralized digital currency that was invented in 2008 by an unknown person or group of people using the name Satoshi Nakamoto. The identity of the creator of Bitcoin has remained a mystery to this day, as they have never revealed their true identity.
The Bitcoin network operates on a blockchain, which is a distributed ledger that records all transactions made using Bitcoin. Unlike traditional currencies, Bitcoin is not backed by any government or central authority, and it operates independently of any financial institution.

Bitcoin has gained significant attention in recent years as a potential alternative to traditional currencies and as an investment opportunity. It has also been the subject of controversy, due in part to its association with illegal activities such as money laundering and drug trafficking.
