

Window is to pane as book is to what?

Window is to pane as book is to _____

page

novel

glass

cover

Show Answer...

Correct Answer: D. page

Analogical Reasoning: Window to Pane, Book to Page

Window is to pane as book is to

Analogical reasoning involves drawing parallels between relationships. Let's explore the analogy between a window and pane and apply it to the relationship between a book and its components.

Answer:

D. page

Understanding the Analogy:

In the given analogy, a window is made up of panes, and the question poses a similar relationship for a book. To find the correct answer, let's analyze the choices:

Options:

A. novel:

This is not the correct answer as a novel is a type of book, not a component like a page.

Window is to pane as book is to what?

B. glass:

Glass has no direct relationship to a book, making this option incorrect.

C. cover:

While a cover is part of a book, it is not the fundamental component analogous to a pane in a window.

D. page:

The correct answer. A book is made up of pages, similar to how a window is made up of panes.

Solution Explanation:

A window is constructed with panes, and similarly, a book is constructed with pages. The analogy emphasizes the structural elements that make up each entity. The incorrect options are ruled out through logical reasoning.

Conclusion:

Analogical reasoning challenges our ability to recognize patterns and relationships. In this case, understanding the components of a window and a book leads us to the correct analogy: window is to pane as book is to page.
